EXPERIENCE

Blockchain Engineer

Aptagon Technologies

06/2023 - 02/2024 Dallas, United States

- Led the development of 5 DApps, optimizing finance and supply chain operations
- Created 50+ automated tests, enhancing security of smart contracts and applications
- Managed 10 critical projects, delivering top-tier blockchain solutions
- Conducted thorough performance tests, resolving blockchain scalability issues
- Collaborated with data scientists to merge data with ML models, increasing accuracy by 15%
- Authored and maintained 15 Node.js web scraping scripts, streamlining data collection
- Orchestrated SDLC phases using Agile, reducing development time by 20%.
- Developed internationalization sites, expanding global company outreach.
- Implemented Firebase for a real-time content platform, enabling multimedia sharing.

Blockchain Engineer

Global Green Tech Solutions

06/2021 - 03/2023 Singapore, Singapore

- Delivered 15 smart contracts and DApps using Solidity on the Ethereum platform
- Engineered 5 bespoke blockchain solutions for various industries
- Worked with an 8-member team to exceed project objectives ahead of schedule
- Optimized scraping scripts, reducing time by 40% and improving data accuracy by 25%
- Processed over 1 million records daily, enhancing e-commerce price monitoring
- Developed Defi decentralised apps using Ethers.js, Morals, Cosmos, React, TypeScript, PostgreSQL, React Native
- Architected and deployed smart contracts for tokens and exchange, Icon including token vesting, refund vaults.
- Deployed 3 NFT smart contracts on polygon using solidity, and decentralised apps using web3 and React
- Improved enhancing back-end performance by 13% and pioneered Docker containerization for streamlined deployment by upgrading data processes with Middleware, Redux-Saga, and Immutable.js
- Generated a 50% enhancement in application life-cycle processes by deploying and maintaining React Hooks and AWS services integration for improved system scalability and performance

SUMMARY

Senior Blockchain & Full Stack Engineer Distinguished Blockchain Developer with a focus on Ethereum, Hyperledger, and Solidity. Specialize in developing and deploying smart contracts and DApps, supported by strong cryptography. Achieved notable success in creating secure, scalable blockchain solutions for complex business challenges. Skilled in a range of blockchain programming languages and frameworks. Dedicated to innovation and continuous professional development.

SKILLS

Agile, Angular, Apis, Blockchain, Ci/CD, Devops, Django, Ethereum, Git, Golang, Hyperledger, Javascript, Jwt, Mongo, Nest.js, Node, Node.js, OAuth, OAuth 2.0, Oracle, Postgressql, Python, React.js, Restful, Restful apis, Rust, Smart contract, Solidity, Typescript, Unit Test, Vue, Vue.js, Web Scraping

EDUCATION

Bachelor's degree, Computer Science

Nepal College of Information Technology

Date period Patan, Nepal

PASSIONS

Music

EXPERIENCE

Full Stack Developer

Apextech

11/2018 - 04/2021 Littleton, United States

- Deployed 10 full-stack web applications, leveraging React.js and Node.js
- Designed RESTful APIs for 5 projects, reducing response times by 30%
- Integrated OAuth 2.0 and JWT across 8 applications, bolstering data security
- Guided a 5-person team in modernizing legacy applications, cutting costs by 25%
- Orchestrated CRUD transactions with JWT token management for enhanced security, resulting in a 6% improvement in data management efficiency through API layer development
- Enhanced user engagement by 5% by deploying a customer-facing web app using ReactJS, Redux-saga, and other technologies; designed web apps with HTML5, CSS3, and JavaScript per code efficiency and TDD adherence

Software Engineer

TechTIQ Solutions

07/2017 - 09/2018 Singapore, Singapore

- Accelerated 20% of projects, improving delivery schedules
- Enhanced 8 system functions, leading to a 10% increase in response times and user experience
- Directed the complete development lifecycle of a SaaS platform, setting and exceeding key milestones by 16%
- Optimized backend architecture, resulting in a 25% reduction in server downtime
- Accomplished a 25% improvement in customer satisfaction rate by engaging with customers to review project progress, gather feedback at different stages, and address any concerns raise
- Engineered 26 high-performance customer-facing web applications by utilizing ReactJS, Redux-saga, React Hooks, React-Router, JavaScript, HTML5, CSS3, and SASS
- Drove a 30% increase in sales by designing and developing user interfaces; crafted data visualizations
- Boosted network, system, and data integrity by 10% by implementing maintenance plans and strategic upgrades

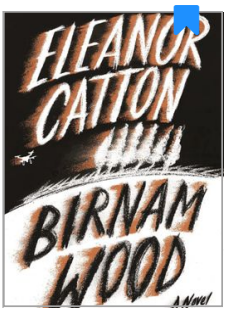
Junior Software Engineer

Genese Solution

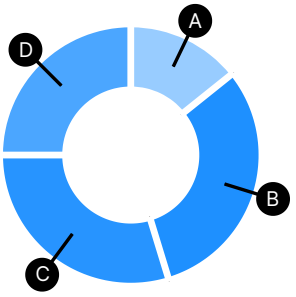
02/2014 - 05/2017 Kathmandu, Nepal

- Contributed to 10 projects, boosting unit test coverage by 40%
- Participated in 13 code reviews per sprint, raising code quality by 20%

BOOKS



MY TIME



- A Start work with a team meeting
- B Continue with back-end coding
- C Wrap up work for the day and log off
- D Relax and unwind with leisure activities
