Senior Elixir Engineer

Expert in Distributed Systems, Event-Driven Architecture & High-Concurrency Applications

Professional Summary

5+ years building scalable Elixir/Phoenix systems, including Kafka event-driven architectures and real-time apps. Designed distributed systems handling 1M+ daily transactions (logistics/OMS). Led migrations from monoliths to microservices (Kafka, OTP, Ecto). Expert in PostgreSQL, system architecture, and startup environments (supply chain/OMS).

Technical Skills

- **Languages:** Elixir, Erlang, Ruby, JavaScript, TypeScript, Golang, Python,
- **Frameworks:** Phoenix, LiveView, Absinthe (GraphQL)
- **Databases:** PostgreSQL, MySQL, MongoDB (query optimization, indexing)
- **Event-Driven:** Kafka, GenStage, Broadway
- **DevOps:** Docker, Kubernetes, Terraform, CI/CD
- **Architecture:** Microservices, OTP, Domain-Driven Design (DDD)
- **Testing:** ExUnit, Property-based testing (StreamData)

Professional Experience

Senior Elixir Developer

Utility Bellhop (May 2022 – Dec 2024) [Logistics/Supply Chain Startup]

- Architected a distributed Order Management System (OMS) using Elixir, Kafka, and Phoenix, reducing order processing latency by 50%.
- Led a team of 5 engineers to migrate a legacy Ruby system to Elixir microservices, improving fault tolerance with OTP supervisors.
- Designed a Kafka-based event-driven pipeline for real-time inventory tracking (10K+ events/sec).
- Mentored junior engineers in functional programming, performance tuning, and event-sourcing patterns.

Elixir Developer

Denver Web Design (Aug 2019 – Feb 2022)

- Built a high-throughput logistics platform using Elixir and Phoenix LiveView, handling 5M+ daily API calls.
- Optimized PostgreSQL queries and introduced read replicas, cutting DB load by 40%.
- Implemented a Consumer Experience dashboard with real-time analytics (LiveView + Telemetry).
- Spearheaded adoption of Kafka for async workflows (e.g., shipment notifications, fraud detection).

Senior Web Developer

Room-Res Inc (Feb 2017 – May 2019)

- Using **GO**, developed a **microservice** for reading large volume of data(millions) from PostgreSQL database.
- Experience writing data APIs and multi-server applications to meet product needs using **Golang**.
- Experience in writing the **HTTP RESTful Web services** and **SOAP API**'s in Golang.
- Designed configurable REST APIs on demand using Go. Worked on numerous go frameworks like **Echo**, **Gin**, **Revel**, **Beego** etc.
- Worked on CI/CD tool **Jenkins** to automate the build process from version control tool into testing and production environment.
- Good understanding of Design Patterns, Multithreading and GO containers. Well versed in using **Channels** and **go routines**.
- Containerized applications using Docker: Created docker files, built docker images for microservices to run on **Kubernetes** platform.

Education

Bachelor's degree in Computer Science/Engineering – Osaka University | 09 / 2016
